KEYMACRO is a development utility which allows you to automatically generate complex macros to perform operations on files. Why choose it? Usually when you are processing a large number of files (and want to avoid changing the extensions manually), you can save some time by using the command line. KEYMACRO supports the following commands: + Sort + Rename + Copy + Move + Test for digital signatures + Search by string + Find files by extension + Create batch files + Create keys + Manage keychains + Verify signatures + Install, uninstall and delete keys + Change server certificates and keys + Set files timestamps + Select matching files + Split files + Merge files + Resize and convert files + De-duplicate files + List file properties + Backup files + Create backups + Set shortcuts on desktop + Rename folders + Reorder + Restore files from backups + Build SQL queries + Decrypt SQL queries + Convert file formats + Manage and restore file timestamps What is new in this version? Added support for encrypted files Added support for the fingerprinting feature Added support for the smart scan feature Added support for the excluded file features Added support for the rename file feature Added support for the delete a file and its backups feature Added support for the automatic keychain feature Added support for the in-app help feature Fixed a bug that prevented multiple keys being loaded simultaneously Fixed a bug that prevented loading keys from working on Windows Server 2003 Fixed a bug that prevented loading keys from working on Windows Server 2008 Fixed a bug that prevented keys being built if the key was created in another profile Fixed a bug that prevented the entire workflow from working correctly Fixed a bug that prevented the usage of "connect to server" in a profile Fixed a bug that prevented the deletion of a keychain if no keychains were selected Fixed a bug that prevented the extraction of a private key from a certificate

1/2

chain Added support for multiple extraction orders Added support for the dmp configuration feature Added support for the md5 configuration feature Added support for the Mime type configuration feature Added support for the S/Mime type configuration feature Added support for the Data type configuration feature Added support for the Tag configuration feature Added support for the Hash configuration feature Added support for the Public Key configuration feature Added support for the Hash configuration feature
